

Air - Quality

VIROXX E150++

**Increase indoor air hygiene levels
by neutralising viruses, germs and
bacteria.**

■ **patented worldwide**

bioclimatic[®]
—The Air - Quality Company—

Never be without healthy fresh air indoors again...

Your health!

The VIROXX E150++! The best indoor air quality in 5 steps:

- Prefiltration with a fine filter for extracting dust particles from the air.
- Photochemical purification (using a combination of photo-oxidation and photocatalysis) with a high-energy, short-wave UVC light and photoactive catalyser. Viruses, germs and pathogens are neutralised and odour molecules are broken down.
- Catalytic oxidation using a downstream catalyser for greater photochemical purification efficiency increases.

VIROXX E150++

- living and sleeping areas
- office space and meeting rooms
- medical practices and waiting rooms
- wellness areas, fitness studios
- lounges
- bars and Clubs
- senior residences
- hotel rooms, foyers
- common rooms and waiting areas
- smoking areas
- and many more applications

The **VIROXX E150++** turns indoor air laden with pollutants, micro-organisms and unpleasant odours into healthy, active, odourless air. The patented Viroxx technology has compelling, functionally unique air cleaning features. The perfectly integrated and efficiency-improving combination of prefiltration, photochemical purification, catalytic oxidation, high-performance micro-filtering and bipolar

VIROXX 5-Step-Technology

■ High-performance micro-filters for reliable extraction of fine dust particles eg tobacco smoke, spores, pollen etc.

■ Bipolar ionisation to enrich the air with 'activated oxygen' for lasting purification of indoor air and efficient neutralisation of odours.

ionisation creates pleasant, hygienic air conditions. Besides options for manually setting up and regulating the unit, an integrated air quality sensor can precisely control the unit depending on actual indoor air pollution levels.

Targeted, reliable air purification and processing with the **VIROXX E150++** reduces the risk of uncontrolled infection and provides noticeably better indoor air.

Model [mm]	Dimensions [W]	Power input (m ³)	Max. room size	Energy requirement
VIROXX E150++	710 x 315 x 800	140	150	230 V; 50 - 60 Hz
